

Advantage

With a totally integrated, comprehensive, browser based, New Jersey only Student Information System, Realtime delivers ease and functionality other companies can only dream about, at a budget friendly annual fee.

Realtime Advantage:

Intuitive:

Realtime's browser-based environment means district data is available securely over the Internet to any device that can connect to the Internet. The clear organization and open appearance of our screens lead to an easy to learn and easy to use environment tailored to the user. All functions are readily accessible. Users can be confident that, if a New Jersey school needs it, it's included. Detailed Role-Based Security allows you to tailor system access to your district's needs and structure.

Integrated:

All system functions, Student Demographics, Attendance, Grading, Discipline, Medical, Special Education Management/ IEP Writer, 504, I&RS, Grade Book, Plan Book and Food Services share a single database. When the district registers a student, all basic information is immediately available to all users and modules. Data flows seamlessly from one module to the next. An assignment in the Plan Book automatically posts to the Grade Book Parent and Student Portals. A food allergy posted by the nurse automatically triggers a restriction on the Cafeteria Point of Sale. The Special Education Management Module/IEP Writer streamlines all functions of the process. From referral through evaluation, IEP

development, tracking student progress, and reevaluation, appropriate teachers are involved, case managers have control and supervisors can monitor progress through the system. Parents and Students can have web-based secure access to district-defined data with Realtime's Parent and Student Portals. Realtime guarantees compliance with all State and Federal reporting requirements and, through our internet-based servers, can literally stay up to the minute with these tasks. Our system automatically prepares SMART, ASSA and other State and Federal reports for your up to date student data.

Superior Support:

Company offices are located in Toms River, New Jersey. Support staff is available to answer your questions when you need answers, not hours later. Districts that utilize our hosted solution receive all application software, backups, security and professional system management from our secure site. We can also deliver our services on district-housed servers. SIS users experience virtually zero latency from our system because our servers are connected directly to the Internet at our enterprise facility. Our fee is all-inclusive and guaranteed for five years. All needed upgrades are included. There will never be fees or additional charges for new releases or to meet government mandates.
