

*Successful schools have involved parents. With Realtime's Parent and Student Portals, parents get involved and stay involved; students and teachers are connected.*

## Parent and Student Portal:

por-tal noun \ `pōr-tel\ - a web site that functions as a point of access to information on the internet, usually dedicated to a particular topic or group of users. Access to information is effortless for authorized users.

*Through the secure Parent and Student Portals, Realtime creates the opportunity for your administrators, faculty and staff to obtain and share information quickly and easily.*

## Here are some example of how a Portal would provide important information:

Parents enter your district Portal to view their child's schedule, attendance records, grades, school calendar, district personnel contact information, download forms and view special information, notices or postings. While there, parents may email a staff member or connect to the teacher's grade book to view information such as their child's test results, homework grades, assignments, worksheets and web links. By providing the Parent with access to the Portal, more parents are connected, and involved.

Students may view their schedules, lunch menus, after-school activities, announcements, and obtain authorized contact information for teachers, administrators, and cocurricular advisors. Students may also have the capability to access homework assignments, class notes, and grades. Your students are connected 24 hours a day, 7 days a week.

## You Decide What Information to Share and With Whom, Built-in Security Ensures Only Authorized Access

The Parent and Student Portals are fully customizable, both in appearance and content. The information that is accessed, the functions allowed, and the individuals permitted access to the Portal is all designated and maintained by you. Secure technology is utilized to ensure that access to your district Portal is restricted to authorized users. Realtime customizes your Portal's access matrix based upon your district's requirements. A letter writer function is included to inform users of their initial user ID and password. We even include a link from the system's contact manager to allow district personnel to view exactly what the parent or student will see.
